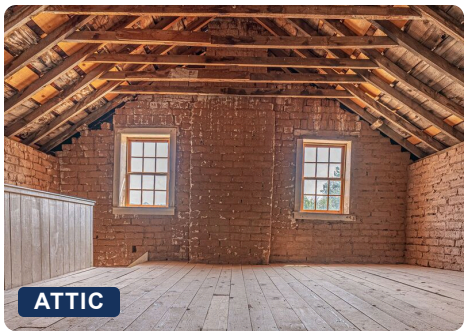
Home Ventilation Checklist

7 signs you need a better exhaust fan

Bathroom, basement and attic: check off what you see in your home.



The 7 signs

Bathroom

1. The mirror stays foggy 15 minutes or more after a shower.
2. Paint peeling or bubbling on the ceiling or walls.
3. Mildew spots coming back on grout and caulk.

Basement

4. A musty smell that does not go away.
5. Damp walls, or condensation on pipes and windows.

Attic

6. Very hot upstairs rooms and high cooling bills in summer.
7. Ice dams on the roof edge or frost in the attic in winter.

Checked 2 or more? Moisture and heat are probably not leaving the house fast enough. A better fan or vent pulls out moisture, fumes and odors, so mold has a harder time taking hold, and keeps upstairs rooms more comfortable.

What we do (electrical items on the existing wiring)

- Bathroom fans installed or replaced
- Fan-light combos for a cleaner ceiling
- Attic fans and vents
- Quiet and humidity-sensing models
- Basement exhaust fans
- Venting checks: is the air really going outside?

How it works

- Free estimate at a visit, or from a few photos of the fan, the ceiling and the room.
- Clear written estimate before any work starts, with photos before and after the job.
- Serving Columbus, Delaware County and up to about 100 miles, Dayton included.

Free estimate: call 380-324-3002 to book a visit, or send the estimate form with a few photos at ohiofixit.com. No cost, no commitment.

Have a bigger project in mind? Call us and we will find the right solution.
